

### Legend

**X** The standard is clearly addressed by program activities.

- This standard potentially could be addressed as part the program either by actions that the coach or teacher takes when working with the students or by conditions established by the program.

Module Abbreviations								
WS	Starting with Workforce Skills	PS	Project Sprints and Competition					
DG	Designing for the Game	14	Industry 4.0 and Your Community					
BR	Building and Programming a Basic Robot	SJ	Sensors Machine Learning and Java					
MM	Machines to Mechanisms	12	Improving through Iteration II					
11	Improving through Iteration I	LC	Learning and Pathways and Career Exploration					

Intro to Computer Programming Grade 12 University Preparation											
ICS4	A. Programming Concepts and Skills	WS	DG	BR	MM	11	PS	14	SJ	12	LC
U											
	A1.1 demonstrate the ability to use integer division and resultant										
	remainders in computer programs;										
	A1.2 demonstrate an understanding of type conversion (e.g., string-to-										
S	integer, character-tointeger, integer-to-character, floating point-tointeger,										
sior	casting in an inheritance hierarchy);										
ores	A1.3 demonstrate the ability to use non-numeric comparisons (e.g.,										
EXI	strings, comparable interface) in computer programs;										
pue	A1.4 demonstrate an understanding of the limitations of finite data										
es	representations (e.g., integer bounds, precision of floating-point real										
Тур	numbers, rounding errors) when designing algorithms;										
ata	A1.5 describe and use one-dimensional arrays of compound data types										
ä	(e.g., objects, structures, records) in a computer program.										
മ	A2.1 create a modular program that is divided among multiple files (e.g.,										
air	user-defined classes, libraries, modules);										
am	A2.2 use modular design concepts that support reusable code (e.g.,								Х		
odu	encapsulation, inheritance, method overloading, method overriding,										
Σď	polymorphism);										

		A2.3 demonstrate the ability to modify existing modular program code to enhance the functionality of a program.			х		х			х	Х	
ľ		A3.1 demonstrate the ability to read from, and write to, an external file										
		(e.g., text file, binary file, database, XML file) from within a computer										
		program;										
ľ		A3.2 create linear and binary search algorithms to find data in an array;										
	A3.3 create subprograms to insert and delete array elements;											
		A3.4 create a sort algorithm (e.g., bubble, insertion, selection) to sort data										
	ns	in an array;										
	ithr	A3.5 create algorithms to process elements in two dimensional arrays										
	gor	(e.g., multiply each element by a constant, interchange elements, multiply										
	۲ N	matrices, process pixels in an image);										
	ning	A3.6 design a simple and efficient recursive algorithm (e.g., calculate a										
sig	ssig	factorial, translate numbers into words, perform a merge sort, generate										
	ă	fractals, perform XML parsing).										
ſ		A4.1 work independently, using support documentation (e.g., IDE Help,			х							
		tutorials, websites, user manuals), to resolve syntax issues during software										
		development;										
		A4.2 develop and implement a formal testing plan (e.g., unit testing,										
		integration testing, regression testing) for a software project to ensure										
	nce	program correctness;										
	ena	A4.3 create fully documented program code according to industry										
	aint	standards (e.g., doc comments, docstrings, block comments, line										
	Š	comments);										
	ode	A4.4 create clear and maintainable external user documentation (e.g.,										
	Ŭ	Help files, training materials, user manuals).										
	ICS4U	B. Software Development	WS	DG	BR	MM	11	PS	14	SJ	12	LC
		B1.1 create a software project plan by producing a software scope	х				х	х			Х	
		document and determining the tasks, deliverables, and schedule;										
	Ħ	B1.2 develop the software product according to the project plan (i.e.,	Х				х	х			х	
	ner	ensure that the software meets end user needs, functions as intended,										
	ct igei	and can be produced within quality standards, budget, and timelines);										
	oje lana	B1.3 produce the software according to specifications (i.e., code, test,	х	х			х	х			Х	
	ξΣ	deploy), and create user documentation and training materials;										

	B1.4 use an appropriate project management tool (e.g., Gantt chart, PERT		Х				х			х	
	R1 5 close the project (i.e., confirm that software meets all user		v				v		┼──	v	
	requirements deliver software in appropriate format, plan software		^				^			^	l
	support and maintenance):										
	B1.6 review the management of the project (e.g., compare plan to actual		х				x			x	
	performance, outline successes, make recommendations for										
	improvement) and prepare a report in an appropriate format;										
	B1.7 demonstrate the ability to use shared resources to manage source	х	х	х	x	х	х	х	х	х	Х
	code effectively and securely (e.g., organize software components using										
	shared files and folders with timestamps, and proper version control).										
Software	B2.1 demonstrate the ability to contribute, as a team member, to the	х	х	х	х	х	х	х	х	х	х
Project	planning, development, and production of a large software project;										
Collabor	B2.2 demonstrate the ability to meet project goals and deadlines by	х	х	x	х	х	х	х	х	х	Х
ation	managing individual time during a group project;										
	B2.3 reflect on, and assess, team and individual progress during the	х	х	х	х	х	х	х	х	х	х
	project review.										
ICS4U	C. Designing Modular Programs	WS	DG	BR	MM	11	PS	14	SJ	12	LC
	C1.1 decompose a problem into modules, classes, or abstract data types								Х		
	(e.g., stack, queue, dictionary) using an object-oriented design										l
	methodology (e.g., CRC [Class Responsibility Collaborator] or UML [Unified										
	Modeling Language]);								<u> </u>		
	C1.2 demonstrate the ability to apply data encapsulation in program								V		1
oign	, , , , , , , , , , , , , , , , , , , ,								^		
esig	design (e.g., classes, records, structures);								^		
r Desig	design (e.g., classes, records, structures); C1.3 demonstrate the ability to apply the process of functional								x	<u> </u>	
ular Desig	design (e.g., classes, records, structures); C1.3 demonstrate the ability to apply the process of functional decomposition in subprogram design;								x		
Aodular Desig	design (e.g., classes, records, structures);C1.3 demonstrate the ability to apply the process of functional decomposition in subprogram design;C1.4 apply the principle of reusability in program design (e.g., in modules,								X X X		
Modular Desig	<ul> <li>design (e.g., classes, records, structures);</li> <li>C1.3 demonstrate the ability to apply the process of functional decomposition in subprogram design;</li> <li>C1.4 apply the principle of reusability in program design (e.g., in modules, subprograms, classes, methods, and inheritance).</li> </ul>								X X X

vrithm Modular Desig	<ul> <li>design (e.g., classes, records, structures);</li> <li>C1.3 demonstrate the ability to apply the process of functional decomposition in subprogram design;</li> <li>C1.4 apply the principle of reusability in program design (e.g., in modules, subprograms, classes, methods, and inheritance).</li> <li>C2.1 demonstrate the ability to analyse a precondition (i.e., starting state) and a postcondition (i.e., ending state) in an algorithm;</li> <li>C2.2 compare the efficiency of linear and binary searches, using run times and computational complexity analysis (e.g., to analyse the number of the process of state) in the process of state.</li> </ul>								X X X		
Algorithm Modular Desig Analysis	<ul> <li>design (e.g., classes, records, structures);</li> <li>C1.3 demonstrate the ability to apply the process of functional decomposition in subprogram design;</li> <li>C1.4 apply the principle of reusability in program design (e.g., in modules, subprograms, classes, methods, and inheritance).</li> <li>C2.1 demonstrate the ability to analyse a precondition (i.e., starting state) and a postcondition (i.e., ending state) in an algorithm;</li> <li>C2.2 compare the efficiency of linear and binary searches, using run times and computational complexity analysis (e.g., to analyse the number of statements executed, the number of iterations of a loop, or the number of</li> </ul>								x x x		

	C2.3 compare the efficiency of sorting algorithms, using run times and										
	computational complexity analysis (e.g., to analyse the number of										
	statements executed, the number of iterations of a loop, or the number of										
	comparisons performed);										
	C2.4 identify common pitfalls in recursive functions (e.g., infinite recursion,										
	exponential growth in recursive algorithms such as Fibonacci numbers).										
ICS4U	D. Topics in Computer Science	WS	DG	BR	MM	11	PS	14	SJ	12	LC
	D1.1 outline strategies to reduce the impact of computers and related							-			
	technologies on the environment (e.g., reduce, reuse, and recycle; turn										
	computers and monitors off at end of day; participate in printer cartridge										
g	recycling) and on human health (e.g. ergonomic standards);										
o an tv	D1.2 investigate and report on governmental and community initiatives							-			
nen ship bilit	that encourage environmental stewardship and promote programs and										
onn ard: ina	practices that support sustainability (e.g., local community recycling										
nvir ewa Ista	centres, private companies that refurbish computers, printer cartridge										
SUS	recycling programs).										
	D2.1 investigate and analyse an ethical issue related to the use of							-			
	computers (e.g., sharing passwords, music and video file downloading,										
	software piracy, keystroke logging, phishing, cyberbullying);										
	D2.2 describe the essential elements of a code of ethics for computer							-			
(0	programmers (e.g., ACM [Association for Computing Machinery] and IEEE										
ice	[Institute of Electrical and Electronics Engineers] standards) and explain										
act	why there is a need for such a code (e.g., plagiarism, backdoors, viruses,										
	spyware, logic bombs);										
hica	D2.3 outline and apply strategies to encourage ethical computing practices							-			
Ш	at home, at school, and at work.										
	D3.1 explain the impact of a variety of emerging technologies on various							-			
s	members of society and on societies and cultures around the world and on										
g gie ety	the economy;										
gin£ volc ocie	D3.2 investigate an emerging technology and produce a report using an							-			
ichr id S	appropriate format (e.g., technical report, website, presentation software,										
En Te an	video).										
	D4.1 report on some areas of collaborative research between computer							-			
	science and other fields (e.g., bioinformatics, geology, economics,										

-			-	 			
	linguistics, health informatics, climatology, sociology, art), on the basis of						
	information found in industry publications (e.g., from the ACM and IEEE);						
	D4.2 investigate a topic in theoretical computer science (e.g.,				-		
	cryptography, graph theory, logic, computability theory, attribute						
	grammar, automata theory, data mining, artificial intelligence, robotics,						
	computer vision, image processing), and produce a report, using an						
	appropriate format (e.g., website, presentation software, video);						
	D4.3 research and describe careers associated with computer studies (e.g.,						Х
	computer scientist, software engineer, systems analyst), and the						
	postsecondary education required to prepare for them;						
ring oute ce	D4.4 evaluate their own development of Essential Skills and work habits						Х
ien ien	that are important for success in computer studies, as identified in the						
S C E	Ontario Skills Passport.
